

UPS Charts

To calculate your total shipping charges, add the weight of each item and calculate the total (shipping weights are listed after each item in brackets []). Next, find your shipping zone on the ground service zone chart. Find the first three digits of your zip code, then follow across to find your shipping zone. Next, look down your shipping zone column until you find the total shipping weight you calculated prior. Please add the corresponding charge to the order form box labeled shipping. Note: For order total weights that include fractions of a pound, take the next higher weight (exam: if your order total weight is 1.25 lbs., your shipping weight should be 2 lbs.).
